Country- United Kingdom

University- University of Essex

Specialization - Data Analyst

Problem Description - To inform police agencies of Texas where they can make improvements by identifying deployment areas where racial disparities exist and are not explainable by crime rates and poverty levels.

Data Understanding: The dataset consists of both numerical and categorical data. Several columns in the dataset contain missing values. Few columns are there which don't contain any values. Columns which have more than 80% missing values are dropped from the dataset. For the rest of the columns, missing values need to be inputted. There are some columns which are not relevant for our studies. Those columns are dropped as well.
